

"Chair with movable seat and backrest"

\*\*\*\*\*

ABSTRACT

5 A chair with a seat and a backrest, a structure supporting the seat,  
and a base; the support structure has two lateral uprights and at least  
one projecting element provided with a substantially longitudinal guide,  
and the backrest is associated with two right-angle elements; each of  
the right-angle elements has a first end connected to the backrest, a  
central part connected rotatably by means of a first hinging pin to a top  
10 end of one of the uprights of the support structure of the seat and a  
second end connected by means of a second hinging pin to the seat;  
the seat is connected to the support structure by means of a telescopic  
rod, which can be shortened and lengthened in a resilient manner, and  
an element which can be slidably engaged in the guide of the projecting  
15 element. (Fig. 2)
